1. Qualitative Information on Quarterly Financial Results

(1) Explanation on Operating Results

During the six months ended September 30, 2022 (the "period under review"), the Japanese economy saw a pickup in corporate earnings, personal consumption, and other factors, though it was influenced by the trend in COVID-19. There was a recovery trend with weakness seen in the Japanese economy, as the simultaneous occurrence of the high resource prices and the appreciation of the U.S. dollar weighed on the recovery of domestic demand.

As for overseas economies, although there was steady performance in the employment and income environment in general, a high level of uncertainty continued due primarily to the impact of concerns about the resurgence of COVID-19, financial and capital market fluctuations, the prolonged situation in Ukraine, and concerns about economic slowdown driven by accelerating inflation.

Under these circumstances, in the stainless steel industry, the primary source of demand for the nickel business that accounts for the majority of the Group's sales and profit and loss, demand trended to recover in line with trends towards the normalization of economic activities, while there was increasing uncertainty in the market condition due to the impact of restriction of economic activities and the sluggish real estate market in China attributable to the resurgence of COVID-19 in that country, concerns about the prolonged situation in Ukraine, and other factors, with capacity utilization rates of production facilities starting to vary.

As a result, the demand for ferronickel showed slowdown.

On the procurement front, as for the procurement of nickel ore, the primary raw material for ferronickel products, the Company maintained the procurement of the volume sufficient to meet our production and sales. On the price front, nickel ore prices have remained high against the backdrop primarily of the impact of Indonesia's unprocessed ore export ban and a robust demand for nickel ore. Moreover, the rate of the increase in production costs was accelerating because of sharp rises in prices of raw materials and fuel used in the manufacturing process and the cost of electricity and other factors. These factors had a significant impact.

Nickel prices on the London Metal Exchange (LME) were continuously affected by financial and capital market fluctuations, complex factors related to the situation in Ukraine, and unstable prices of crude oil and other commodities. There were also concerns about an economic slowdown due to accelerating inflation, and prices remained directionless while remaining at a relatively high level.

In this situation, the Company's ferronickel sales volume was planned modestly due to the impact of production decrease caused by the electric furnace molten material leakage incident that occurred in one of the three furnaces in the ferronickel manufacturing facilities just before the end of the previous fiscal year, and the sales volume decreased by 56.3% year on year as a whole due to a decrease in both domestic and overseas sales against the backdrop of a continuous partial shift in raw material procurement by overseas stainless steel producers to nickel pig iron and other materials that are more price competitive and variation in capacity utilization rates of production facilities in the stainless steel industry.

The ferronickel production volume decreased year on year due to the impact of the electric furnace molten material leakage incident. Regarding the restoration of the affected unit of the production facilities, resumption of operation, which was expected to be in the third quarter of this fiscal year, has been postponed until the next fiscal year. This is because the Company changed its policy with the objective of strategically controlling volume to a certain level so as not to impair profitability. This decision reflects easing of the nickel supply-demand balance. It was also taken because producers of stainless steel are shifting some of their procurement to nickel pig iron, which has a price advantage, even including with respect to production costs, and the price of nickel pig iron is also affecting the selling price of the Company's products. While closely monitoring the business environment, the Company will resume operation of the said electric furnace once the volume control policy is lifted. During the third quarter of this fiscal year, production facilities are expected to be repaired to a state such that resumption of their operation will be possible.

Amid continued responses to the increasingly uncertain business environment, the selling price of ferronickel products increased as the LME nickel price applicable to the Company increased by 49.2% year on year and the average exchange rate of Japanese yen applicable to the Company was 20.5% weaker year on year. On the other hand, the price of nickel pig iron, which has a price advantage, is affecting the selling price

of the Company's products. Therefore, the Company also refers to the price of nickel pig iron in addition to the applicable LME nickel price and the applicable exchange rate in setting the selling price of the Company's products, and thus the selling environment is rapidly changing into a difficult one with stagnant revenue growth.

Although the COVID-19 pandemic and the situation in Ukraine are expected to continue as mentioned above, the Company continues to implement measures in response to the highly uncertain business environment. To further strengthen its earnings base, the Company is striving to reduce total cost through energy conservation and low-cost production, strengthen facilities to build an optimal production system, work toward long-term and stable procurement of ore, and thoroughly focus on the profitability of orders, thereby building a flexible production and sales system. Furthermore, the Company continues its efforts to improve business performance and stabilize earnings through measures such as the early realization of overseas business development and new mine development as well as reinforcement of operational efficiency improvement measures to pursue cost minimization.

Operating results by business segment are as follows.

(i) Nickel business

The operating results of the nickel business are described in "(1) Explanation on Operating Results." As a result, net sales in this segment decreased by 27.0% year on year to ¥17,319 million with operating loss of ¥4,328 million (compared with operating profit of ¥996 million for the same period of the previous fiscal year).

(ii) Gas business

In the gas business, the Company maintained a stable operation, but this segment recorded a loss due partly to the recording of costs associated with facility repair.

As a result, net sales in this segment increased by 13.3% year on year to \$343 million with operating loss of \$25 million (compared with operating profit of \$16 million for the same period of the previous fiscal year).

(iii) Other

The segment of other businesses recorded a loss. The real estate business had no new sales contracts concluded, and the waste recycling business's order-taking was sluggish.

As a result, net sales in this segment decreased by 75.4% year on year to ¥28 million with operating loss of ¥114 million (compared with operating loss of ¥65 million for the same period of the previous fiscal year).

(2) Explanation on Financial Position

Assets, liabilities, and net assets of the Group as of September 30, 2022 are as follows.

Total assets decreased by \(\frac{4}{6},230\) million from the end of the previous fiscal year to \(\frac{4}{83},622\) million.

Current assets decreased by ¥6,058 million from the end of the previous fiscal year mainly due to a decrease in cash and deposits resulting from the settlement of merchandise and finished goods and the decline in sales quantity, partially offset by an increase in merchandise and finished goods and other items impacted by the maintenance of planned inventory quantity and an increase in raw material and fuel prices.

Non-current assets decreased by ¥172 million from the end of the previous fiscal year mainly due to a decrease in investment securities resulting from a drop in the market price of some stocks held, despite an increase in property, plant and equipment resulting from investment in maintenance/replacement. Investment securities held by the Company amounting to ¥23,440 million consisted mainly of ¥15,757 million in the amount reflected in the consolidated balance sheet of shares of entities accounted for using equity method, ¥2,378 million in shares of subsidiaries and associates, and ¥4,750 million in shares of Nickel Asia Corporation, a holding company of the Company's equity-method affiliates listed on the Philippine Stock Exchange.

Total liabilities decreased by \(\frac{\pma}{2}\),157 million from the end of the previous fiscal year to \(\frac{\pma}{7}\),542 million.

Current liabilities decreased by ¥1,427 million from the end of the previous fiscal year primarily owing to a decrease in income taxes payable in line with the payment of income taxes and other factors.

Non-current liabilities decreased by ¥729 million from the end of the previous fiscal year mainly due to a decrease in deferred tax liabilities resulting from a drop in the market price of some stocks held.

Total net assets decreased by ¥4,073 million from the end of the previous fiscal year to ¥76,080 million.

Shareholders' equity decreased by \$2,794 million resulting from the recording of profit, partially offset by the payment of dividends. Accumulated other comprehensive income decreased by \$1,269 million resulting from a decrease in valuation difference on available-for-sale securities. Non-controlling interests decreased by \$9 million.

(3) Forward-looking Statements Including Consolidated Financial Results Forecast

With regard to the consolidated financial forecast, the economic outlook remains highly uncertain as COVID-19 and the situation in Ukraine continue to affect the domestic and overseas economies.

On the volume front, the Company expects a challenging business environment with results expected to fall short of the previously announced plan. In addition to the impact of the electric furnace molten material leakage incident that occurred in one of the three furnaces in the ferronickel manufacturing facilities just before the end of the previous fiscal year, this is because the Company changed its policy with the objective of strategically controlling volume to a certain level so as not to impair profitability. This decision reflects easing of the nickel supply-demand balance due to mounting uncertainty triggered by the impact of restriction of economic activities and the sluggish real estate market in China attributable to the resurgence of COVID-19 in that country, concerns about the prolonged situation in Ukraine, and other factors. It was also taken because producers of stainless steel are shifting some of their procurement to nickel pig iron, which has a price advantage, including with respect to production costs, and the price of nickel pig iron is also affecting the selling price of the Company's products. Regarding restoration of the electric furnace which has suspended operation owing to the leakage accident, resumption of operation, which was expected to be in the third quarter of this fiscal year, has been postponed until the next fiscal year, because of the shift of the Company's policy to volume control, as mentioned above. While closely monitoring the business environment, the Company will resume operation of the said electric furnace once the volume control policy is lifted. During the third quarter of this fiscal year, production facilities are expected to be repaired to a state such that resumption of their operation will be possible.

On the selling price front, the LME nickel price applicable to the Company, which is used as an indicator for determining the selling prices of the Company's ferronickel products, remains at a relatively high level. On the other hand, the price of nickel pig iron, which has a price advantage, is affecting the selling price of the Company's products. Therefore, the Company also refers to the price of nickel pig iron in addition to the applicable LME nickel price and the applicable exchange rate in setting the selling price of the Company's products, and thus an impact on net sales is expected.

On the procurement front, while the volume of nickel ore and other materials necessary to meet production needs is expected to be secured, prices of nickel ore remain high. Moreover, the rate of the increase in production costs is accelerating because of sharp rises in prices of raw materials and fuel used in the manufacturing process and the cost of electricity and other factors. These factors are expected to have a significant impact on profit.

Although the impacts of COVID-19 and the situation in Ukraine are expected to continue in this fiscal year, response measures to address such business environment are consistent with activities to be undertaken under the basic policies set forth in the Group's Medium-term Management Plan, and the Company will continue to strongly push forward with these measures.

Based on the above, the Company revised its consolidated financial results forecast as follows and also reviewed underlying assumptions, as announced in "Notice Concerning Recording of Operating Loss (Writedown of Inventories), Recording of Non-operating Income (Share of Profit of Entities Accounted for Using Equity Method), Revisions to Financial Results Forecast, and Dividends Forecast" dated October 28, 2022.
