| Applicable exchange rate (¥/US\$)        | 140.18   | 151.61  | 153.32   | 9.4                 | 1.1  |

#### (2) Financial results for the six months (Topics)

#### 1) On the production and sales volume front

- Maintaining policy of strategic volume reduction
- ➤ The price of nickel pig iron (NPI), which is viewed as being price competitive, also affected our selling prices, which led us to continue our policy of strategic volume reduction

#### 2) On the selling price front

- Impact from nickel pig iron (NPI) price
- ➤ We set selling price level based on the LME nickel price applicable to the Company, the exchange rate applicable to the Company, and in addition, the nickel pig iron price as a partial reference, resulting in the continuation of a difficult sales environment with sluggish income growth

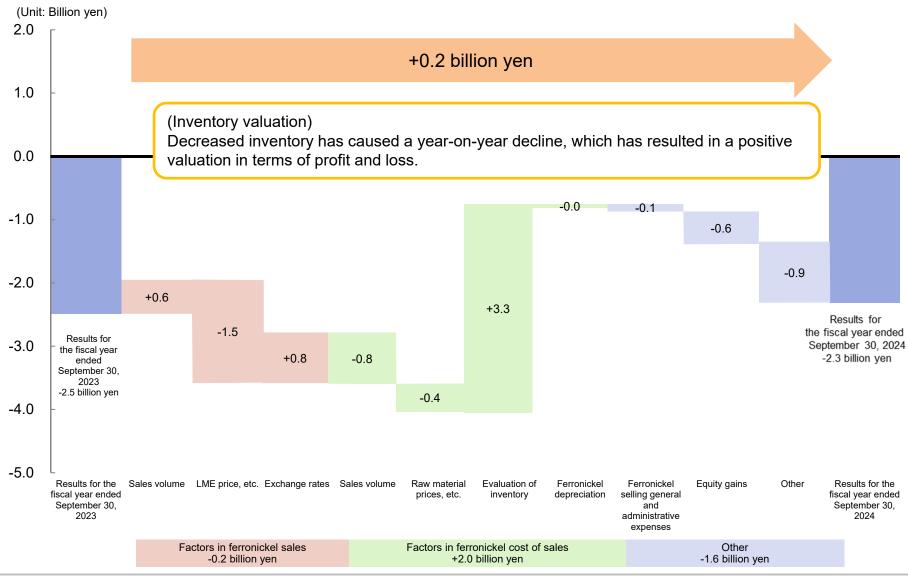

#### 3) On the procurement price front

- Nickel ore price
- Procurement prices are high
- Energy costs (raw fuel/electricity)
- ➤ Energy prices are high due to a global rise in resource prices, causing production costs to remain high

### 2. Financial Results for the Six Months Ended September 30, 2024

#### (3) Consolidated ordinary profit and loss analysis

# 3. Full-Year Financial Results Forecast for the Fiscal Year Ending March 31, 2025

#### (1) Full-year financial results forecast (Summary)

#### (2) Full-year financial results forecast (Topics)

#### 1) On the production and sales volume front

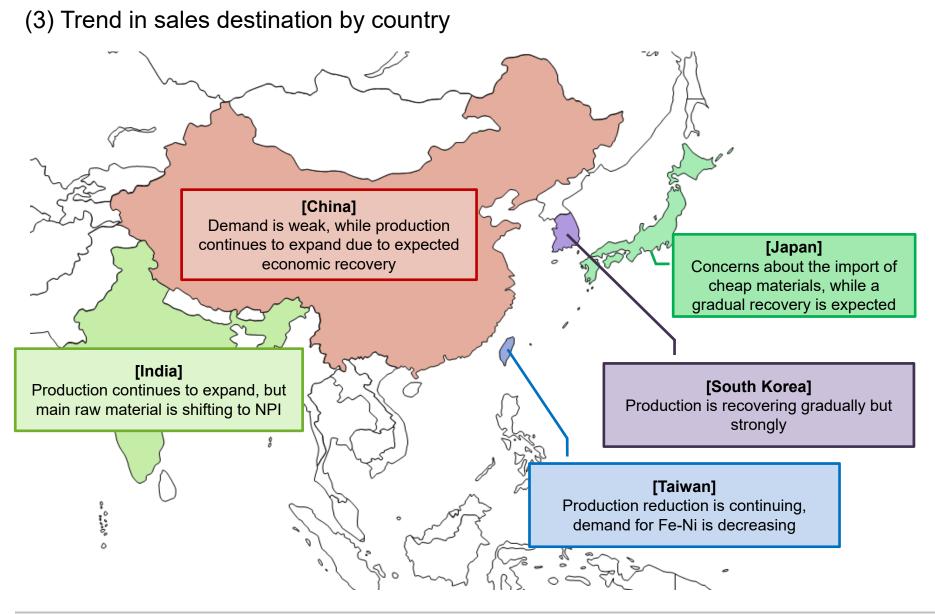

- Maintaining policy of strategic volume reduction
- ➤ With no significant changes in the business environment, we enhance volume reduction from a profitability perspective and expect results to be at almost the same level as the previous forecasts (announced in July 2024)

#### 2) On the selling price front

- Impact from nickel pig iron (NPI) price
- ➤ We set selling price level based on the LME nickel price applicable to the Company, the exchange rate applicable to the Company, and in addition, the nickel pig iron price as a partial reference

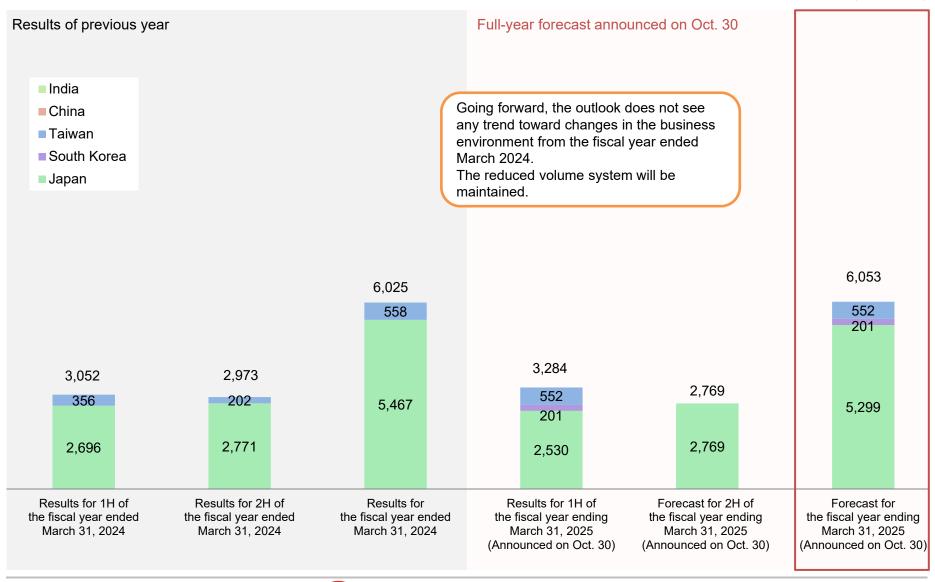

#### 3) On the procurement price front

- High raw material and energy costs continue
- ➤ Nickel ore prices, the main raw material, as well as raw fuel costs and electricity prices remain high
- A significant impact on profit expected

#### (4) Outlook for sales by country

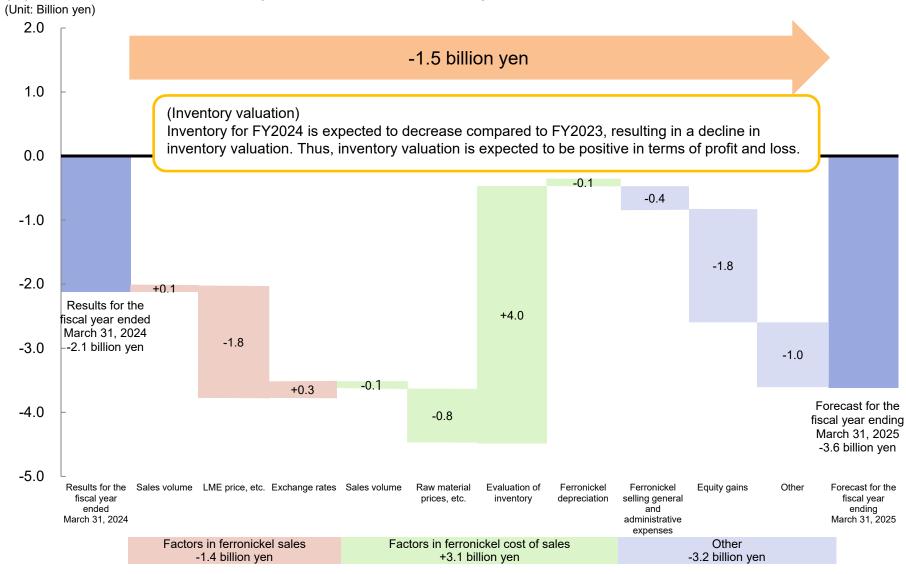

(Unit: Ni tons)

#### 3. Full-Year Financial Results Forecast for the Fiscal Year Ending March 31, 2025

#### (5) Consolidated ordinary profit and loss analysis

(1) Summary of progress on major priority measures

### **Priority Measures**

(Key presented details are <u>underlined</u>)

- Creation of new businesses that contribute to society
- Promotion of new metal smelting projects (1) (2)
- > Realization of production and sales of raw materials for LIB materials
- Acceleration of consideration of expansion into overseas smelting business
- > Promotion of overseas smelting projects and start-up of production
- Diversification of business in Japan to contribute to a recycling-oriented society
- > Restructuring of recycling business
- Enhancement of corporate value by addressing sustainability issues
- > Reduction of GHG emissions
- > Promoting harmonious co-existence by contributing to regions and resource-providing countries
- > Promoting constructive dialogue with stakeholders

#### Promotion of new metal smelting projects (1)

Feasibility study of new metal smelting business using resources from underwater sources (F/S)

◆ Our strengths and advantages in commissioned smelting of polymetallic nodules

#### **Technology and knowhow**

The technology and knowhow we have developed in the metal smelting business over the years

#### **ESG** efforts

Our smelting technology that minimizes environmental impacts and close monitoring control of safety and quality

World's first commercialized smelting of polymetallic nodules

Establishment of a new revenue model

#### **Smelting in Japan**

Smelting of critical minerals for LIB use in Japan, which is recognized as an FTA country under the Inflation Reduction Act in the U.S.

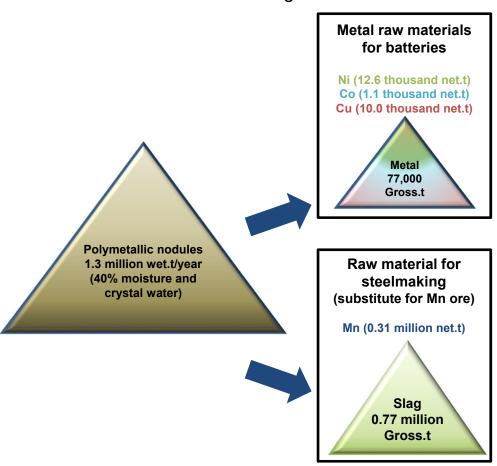

**Reduction of investment** 

Reduction of investment by utilizing Fe-Ni smelting facilities

#### Promotion of new metal smelting projects (1)

Feasibility study of new metal smelting business using resources from underwater sources (F/S)

◆Scale of commissioned smelting

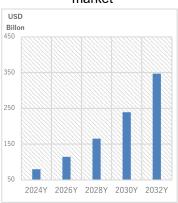

#### ◆Demand in products created by smelting

Percentages of demands for Ni, Co and Cu for application in clean energy technology

Global lithium-ion battery market

Global Mn-alloy market

#### Promotion of new metal smelting projects (1)

Feasibility study of new metal smelting business using resources from underwater sources (F/S)

#### ◆Milestones

Successfully conducted a calcination test on polymetallic nodules in a ferronickel production facility.

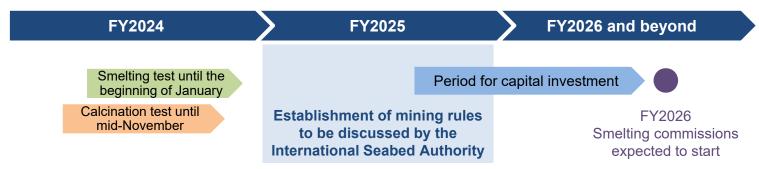

(Press release of The Metals Company on September 9, 2024)

https://investors.metals.co/news-releases/news-releases-details/world-first-tmc-and-namco-achieve-breakthrough-commercial-scale.

Successfully produced approximately 500 tons of calcinated ore by supplying 1,200 tons of polymetallic nodules to our largest rotary kiln with a total length of 131 m and a diameter of 5.5 m using polymetallic nodules obtained in pilot mining by The Metals Company in 2022.

• <u>Currently conducting a smelting test</u> of high-quality Ni-Co-Cu metal and Mn slag after transferring the obtained calcinated ore to an electric furnace.

#### **◆**Timeline

#### Promotion of new metal smelting projects (2)

#### Beryllium production and sales business through collaboration

◆Conclusion of a comprehensive business cooperation agreement with MiRESSO

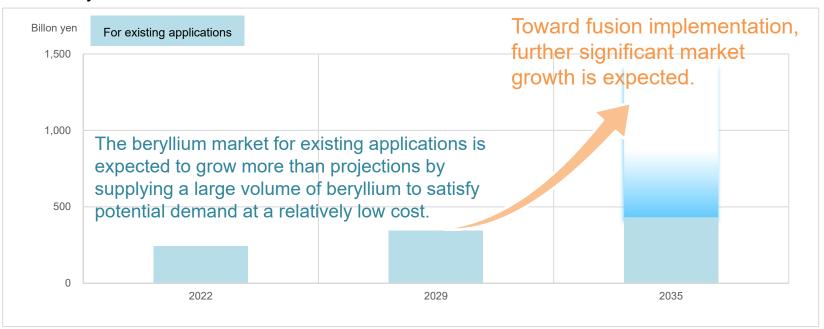

MiRESSO and our company will establish a pilot beryllium plant at our Hachinohe Works in order to conduct a pilot demonstration of MiRESSO's proprietary low-temperature refining technology, with the aim of starting beryllium production in FY2027.

\* MiRESSO Co., Ltd.

A fusion startup certified by the National Institute of Quantum Science and Technology (QST).

Its vision is to contribute to the social implementation of fusion energy by providing a stable, low-cost supply of beryllium through its innovative low-temperature refining technology.

#### ◆Global beryllium market

#### Promotion of new metal smelting projects (2)

Beryllium production and sales business through collaboration

◆Advantages of MiRESSO's proprietary low-temperature refining technology

Reduction of environmental impacts can be achieved in addition to cost reductions.

Results of a comprehensive sustainability analysis conducted by aiESG analysis (relative comparison for 1 kg of dissolved beryllium) INDUSTRY, INNOVATION
AND INFRASTRUCTURE 13 CLIMATE ACTION **Environmental** Analysis of workers' human **Economic** analysis analysis rights and risks thereto Reduction Reduction Reduction Reduction of over of over of over of over Conventional technology Conventional technology Conventional technology Conventional technology 90% 90% 90% MIRESSO MIRESSO MIRESSO MIRESSO **Production** Greenhouse **Dangerous** Energy consumption costs gas emissions work

Significant advantages in terms of the economy, environment and safety

#### Promotion of new metal smelting projects (2)

#### Beryllium production and sales business through collaboration

◆Overview of the comprehensive business cooperation contract

#### Purpose:

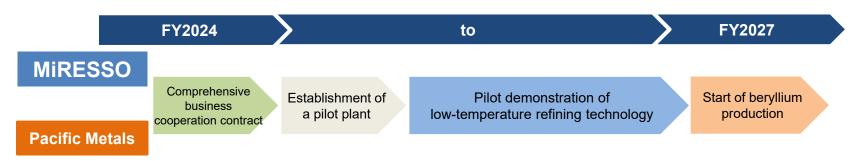

To aim to commercialize the "Beryllium production and sales business" and the "Technology platform business for low-temperature refining technology" by bringing together both companies' management resources and knowhow.

#### Scope of contract:

Planning, research, development, design and sales activities for this business

#### Roles:

- MiRESSO: Leading the project with its management resources and knowhow
- Pacific Metals: Providing a reasonable range of its management resources (human resources, facilities, technologies)
- ◆Basic concept of the beryllium production and sales business

<sup>\*</sup> MiRESSO was selected as a phase-3 business under the small/startup business innovation research (SBIR) system of the Ministry of Education, Culture, Sports, Science and Technology.

MiRESSO has received 2.0 billion yen of subsidies for the business theme of "Demonstration of a low-temperature refining technology for stably securing beryllium resources for fusion furnaces," and it will establish a pilot plant and conduct a pilot demonstration of low-temperature refining technology in cooperation with us.

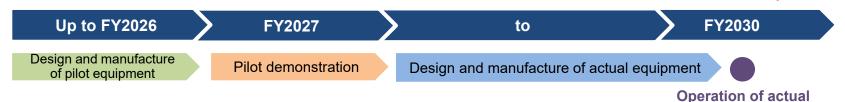

#### Reduction of GHG emissions

Electrification of ferronickel production calcination process

**◆**Timeline

Coal-derived GHG emissions to be reduced by 67%

equipment

#### ◆ Milestones

- Successfully implemented calcination and reduction of nickel ore using standard microwave bench-scale equipment through cooperative research with Microwave Chemical Co., Ltd.
- <u>Confirmed the new advantages for the current calcination process</u> through a continuous emission operation test using bench-scale equipment
- ✓ Reduced fossil-fuel-derived GHG emissions (already achieved)
- ✓ Improved energy efficiency by directly heating nickel ore by microwave (already achieved)

Almost no dust generated in exhaust pipes with less dust dispersion in the calcination furnace

- ✓ Reduced energy consumption by recalcination due to a substantial decrease in return dust (new)
- <u>Started discussions on designing microwave pilot equipment</u> (increase in scale from several kilograms to several tons)

#### Other Priority Measures

Realization of production and sales of raw materials for LIB materials

- Promoting research and development for producing raw materials for LIB cathode materials that meet the
  requirements of the Inflation Reduction Act in the U.S., with a target of starting supply to the U.S. market in
  2030
- Aiming to produce net nickel of approximately 5,000 tons/year and net cobalt of approximately 500 tons/year for our estimated business scale in order to take advantage of economies of scale

#### Promotion of overseas smelting projects and start-up of production

- <u>Difficult to realize for the time being</u> because of challenges related to the participation of a foreign company (our company) in the dry smelting furnace project in Indonesia
- Aiming to build relationships through technical support for mine operations, for which there is strong demand, in pursuit of future opportunities to participate in hydrometallurgy projects, rather than focusing on obtaining an interest in a dry smelting furnace project

#### Restructuring of recycling business

- <u>Continuing marketing activities</u> in the production and sales business of raw materials for steel manufacturing and metal materials for batteries
- Confirmed demand of several thousands of tons per year for raw materials for steel manufacturing
- <u>The feasibility of commercialization is to be assessed</u> as the raw materials for steel manufacturing have been verified to have a quality equivalent to that of existing products as a result of the actual equipment test, with discussions on the desired price underway

#### Enhancement of corporate value by addressing sustainability issues

- Obtained Silver Certification (Certification No. 3036) as an excellent health management company
- Participated in the Umigomi Zero Week event

#### (2) Progress on investment plan

#### • \*1

Postponed the new business-related investments designed in PAMCO-2024. (Despite establishing a cobalt sulfate production process (and obtaining a patent), the investment policy has been reviewed based on a change in the environment and we have shifted to investment in developing a production process for rare metal for LIB materials using other raw materials.)

• \*2

We, as a foreign company, face challenges in entering such markets because of issues related to the rights to exploit and run mines. A considerable period of advanced preparation is required to solve these issues; thus, capital participation is difficult for the time being. On the other hand, we are continuing our activities to develop overseas businesses.

<sup>■</sup> The Philippines
■ New Caledonia

#### 2) Procurement ratio

#### 3) Procurement situation

## <u>Situation surrounding the nickel market in New</u> Caledonia

SLN, the main supplier of New Caledonian ore, was not permitted by the local government to obtain permission to mine ore in a new section within the mining area for political reasons.

The procured volume of New Caledonia ore has declined because of the projected significant decrease in production volume of ore and the suspension of mine operations due to the riot that occurred in May 2024. Therefore, the situation remains uncertain.
